## *Instructions for Operating* **LIONEL NO. 2056 STEAM LOCOMOTIVE**

Lionel No. 2056 Steam Locomotive is a replica of the Steam locomotive used for passenger service.

Lionel's 2056 Steam Locomotive is built to run on either "O" or O27" track. The 2056 Steam locomotive is powered by a single motor driving three axles which enable it to pull a long string of passenger cars. The operating voltage of this locomotive is from 8 to 18 volts depending on the train load.

### ***LIONEL "MAGNE-TRACTION"***

This locomotive is equipped with "Magne-Traction" which means that its driving wheels are magnetized by powerful Alnico magnets inserted in the driving axles in order to grip the track and enable the locomotive to pull heavier loads and climb steeper grades without slipping on the track. Be careful not to let pins, paperclips, carpet tacks or other small iron objects come in contact with the locomotive or they will be attracted to the wheels, gears, or axles and interfere with the action of the locomotive. NOTE: "Magne-Traction" is not effective on aluminum, brass or other non-magnetic rails. The locomotive also includes two traction tires, which will improve traction on both magnetic and non-magnetic rails.
